We understand your mandate and regulations

Your program must provide a secure, sustainable, and economically powerful infusion to local communities. To align with Federal standards and financial incentives, the solution will also need to be framed by [Federal Infrastructure Law](#), [The White House's Electric Vehicle Charging Action Plan](#), Executive Orders [14005](#) and [14057](#), the [Federal Highway Administration National Electric Vehicle Infrastructure Formula Program](#), as well as state and local building code and energy regulations.

We provide fully-compliant, end-to-end solutions

CBRE teams are structured to deliver highly-coordinated and efficient asset procurement, deployment, and management programs for national and multi-national initiatives surrounding EV charging.

Our clients benefit from a single-point-of-contact to own and manage program-wide operations and finances., receive direct partnership with all major original equipment manufacturers, are connected to a pre-approved national and small/diverse/local partner network, and enabled by per-project adjustments of CBRE self-performance vs. locally contracted services to attain all requisite spending targets with national consistency in execution.

Integrated Solution
